Tutorial – How to Create a Kanban Board in Microsoft Whiteboard

Step 1 – Open Whiteboard

- Go to https://whiteboard.microsoft.com and sign in with your university account.
- Create a new whiteboard and name it **Team Kanban**.

Step 2 – Create Columns

- Use **tables** or **rectangles** to divide the board into vertical columns.
- Typical columns: To Do | In Progress | Review | Done.
- Write the column names using **text boxes**.

Step 3 – Add Tasks

- Use **sticky notes** (Insert → Note) to create tasks.
- One sticky note = one task.
- Use colors to distinguish user stories (e.g., all tasks from Story A in blue, Story B in green).

Step 4 – Define WIP limits

- Write the maximum number of tasks allowed in “In Progress” at the top of the column.
- Example: “Max 3 tasks here”.

Step 5 – Move Tasks

- Drag and drop sticky notes between columns as your team simulates working.

Step 6 – Save and Share

- Share the whiteboard link with your team members and with the teacher.
- Take a screenshot of the final board for your reflection.
