Quick recap of Session 2.

Task 1. Part 2: The audience

To whom and why are we designing our dashboard?

Personas

Feature	Audience profile
Domain knowledge	
Statistics and visualization knowledge	
Relevant demographic features	
Platform	
Pain points / Desires	
What do they need to know	
Frequency of use	

If you want, you can synthesize all this information in a created “persona”

Scenarios

Describe a possible scenario where the dashboard solves a problem/need of the user

Questions to answer

State 5 to 7 questions that the dashboard has to answer. Relate them to a possible function of the chart such as compare, see trends, look at relationships...

01 - FUNCTION	02 - FUNCTION	03 - FUNCTION	04 - FUNCTION	05 - FUNCTION	06 - FUNCTION	07 - FUNCTION
Question	Question	Question	Question	Question	Question	Question
How does it fit with the goal of the user?	How does it fit with the goal of the user?	How does it fit with the goal of the user?	How does it fit with the goal of the user?	How does it fit with the goal of the user?	How does it fit with the goal of the user?	How does it fit with the goal of the user?

GitHub

Create an image 800 x 450 pixels and include it in your HTML page task02.html

Explain your main findings in 200 to 300 words and include the explanation in your HTML page task02-explanation.html

Task

You can upload this pretask to Task1 delivery by Friday and you’ll get my feedback.

Presentation and Visualization

Task wording

Part 2: Audience (top-bottom): Who is your audience? 15%

This part shall describe the audience in a thorough way in order to plan the visualization from a top-down approach. Are they experts in the use of charts? Which platform (mobile, PC, tablet – choose only one --) will they use to see your charts? [I recommend tablet or desktop computer for this initial task] How often will they use your dashboard? Describe a persona, their goal and a scenario of use of your visualization

Based on the dataset and the audience, describe the goals of the dashboard and state 5 to 7 questions your dashboard must answer.

The questions shall be written from the perspective and needs of users.
