Quick recap of Session 3.

Task 1. Part 4: Selection of charts and encoding

What to deliver: In-class activities and GitHub: Do the described task for 1 or 2 charts. Complement with a draft of the dashboard. Optional task delivery: With your selected dataset upload a partial delivery in Delivery 1 task.

1) Enumerate the charts you will use and the encoding.

For each chart, describe:

Chart 1:

[Chart name]
[Goal]

Explain aggregation, precision, data selection decisions:

For each field included in the chart explain the visual encoding:

Field	Encoding	Function	Relation with perception theory	(Optional) legend

Chart 2:

Chart 3:

...

Explain the use of colour in the dashboard:

2) Design the layout considering Gestalt laws.

Gestalt principle	How is it applied in the dashboard?	Why?

3) Include a first draft of the dashboard and answer the questions with it.

Question	How this question will be answered with the dashboard?

Task wording

Part 4: Selection of chart and encoding 15%

Decide the type of charts and the encoding of the data considering the Dashboard's goals, the function of the charts and the available data. Describe decisions on encoding and selection of charts, layout, based on perception properties and Gestalt laws, visualization principles and best practices.

Create a prototype design, low-fi, and explain how this design will answer the proposed questions. Argument decisions.
